Burton College (2003 – 2007)

HND Computing
Includes CCNA 1-4 modules
(BTEC) National Diploma Computing
A+ CompTIA Certification

Throughout my years in education and work I have gained experience in, including but not limited to, the following areas:

*MS Office, Exchange, Active Directory,
Group Policy*

Linux, Windows Server

IIS, Apache, Tomcat

*TCP/IP, HTML, XML, JAVA, Java Script,
C++, VB Script, SQL*

*Wireless Security & Cracking (WEP,
WPA)*

Nmap/ZenMap, Netcat,

Nessus/OpenVAS, WebScarab,

*Wireshark, Autopsy/PTK, WFT, Helix,
Snort*

*Various hacking/cracking/scanning
tools (many found on BackTrack5)*

Interests and Activities

I run a large online community group and as a result am the sole person responsible for the setup and maintenance of resources which include a variety of hosting packages with many SQL databases and machines in discrete datacenters. These are a mixture of Linux and Windows and require a lot of knowledge regarding 'Internet Technologies' as well as mitigation on arising issues. There's also a requirement for me to be capable of delving into a wide variety of programming languages and scripts in order to ensure everything runs smoothly. As part of this I create my own documentation to distribute amongst my voluntary staff teams.

Additional Information

I have a current and valid UK passport and have resided as a UK citizen throughout my life. I do not currently hold a driving licence but this has never surfaced as an issue previously. I have passed extensive CRB checks in the past in addition to meeting the requirements for a firearms certificate which I currently hold, so would have little issue in clearing any security checks that may be required.
